MOBILE SOFTWARE ENGINEER – ANDROID (ALL GENDERS)

HYBRID – KARLSRUHE – STUTTGART – FRANKRFURT/MAIN

We're looking for a highly-skilled software engineer (m/f/o) to take responsibility for customer projects within an interdisciplinary team. Our ideal candidate will have expert knowledge of the complete software development process (conception, development, architecture, implementation) and skilled in coding for both the frontend and backend. If finding issues and fixing them meticulously with beautiful code are among your talents as software engineer, we'd like to hear from you.

WHAT YOU CAN EXPECT

- Plan and execute full software development life cycles for each assigned project, adhering to company standards and expectations
- Continuous development of mobile applications, adapt them to technological innovations and ensure the seamless integration of the software into the company's IT
- Examine existing systems, identifying flaws and creating solutions to improve systems
- Your working style is characterized by personal responsibility, goal orientation and your willingness to contribute and develop in an agile and cross-functional team
- You are not only taking up innovative technologies, methods and trends, but also actively shaping them

WHO WOULD FIT IN WELL

- Degree in Computer Science or comparable education
- 3+ years experience in developing mobile applications for Android (Java/Kotlin) and cross platform development
- Experience in designing and implementing Android APIs, Android Jetpack Libs/APIs, Play Services and Espresso UI Testing
- Familiar with Kotlin: Core Language, Coroutines and Flow as well as Gradle and Gradle Kotlin DSL
- Working experience using design patterns such as MVVM and MVI
- Proven experience with OOP / Functional Programming
- Proficiency with Git
- Creating CI/CD Pipelines (GitLab, Jenkins, GitHub)
- High social and intercultural competence and the ability to collaborate in agile teams
- Fluent English language skills
- Basic German language skills (nice-to-have)
- Development of REST Endpoints (nice-to-have)
- Using libs such as Retrofit, Ktor, Koin, Coil, etc. (nice-to-have)
- Handling the Google Play Console (nice-to-have)
- Knowledge in Firebase APIs (Analytics, Push, etc.) (nice-to-have)
- Experience with test driven development (nice-to-have)

WHAT WE STAND FOR

- At arconsis you are surrounded by software engineer enthusiasts and gripping projects await you

- We love to share knowledge and support each other

- Working together as an interdependent team to accomplish a common goal, and knowing how to get things done

- We maintain high personal standards, and possess an ongoing, voluntary, and self-motivated pursuit of knowledge

- Challenging tasks in a powerful and dynamic cross-functional team with flat hierarchies

- Open communication and a pleasant working atmosphere with cool colleagues, innovative technologies and a lot of fun at work

- Excellent individual development and training opportunities, Brown-bags, Meetups

- Room for ideas and the opportunity to shape solutions

Are you enthusiastic about innovative technologies, methods and trends and strive to find the right balance between engineering and creativity? Your mindset is characterized by technological passion, motivation and conceptual thinking and acting? You are willing to learn and grow with us?

Then we are looking forward to getting to know you. Send us your application!
